ABSTRACT

2 A system and corresponding method provide a web-based location finder service
3 that enables a user to locate a subscriber's mobile telephone handset using a web browser.
4 The web-based location finder service uses a position determination system to determine
5 the location of a mobile telephone handset. A user with permission may use a web
6 browser on a computer, such as a personal computer (PC) or a handheld computer, to log
7 on to the web-based location finder service and conveniently track the location of a
8 mobile telephone handset.
